

Revolving funds and technical assistance facility to create high-quality forest carbon projects

TREEVIVE (a planned subsidiary of Form International)

The Netherlands (HQ), with global operations

Sector: Carbon credit, restoration, wild forest production, agroforestry, biodiversity

Treevive develops new forest carbon projects by offering forest managers pre-finance and hands-on technical assistance to reach certification (according to international standards such as VCS). Once established, it connects the project to the premium carbon market and its network of impact-committed investors and buyers. Treevive functions as a revolving fund, where profit from a developed project will feed the pre-financing and (further) development of new projects. Treevive also offers support on project management, implementation and monitoring, as well as services to develop other

revenue drivers including timber and agroforestry products. Treevive builds on 30 years of extensive track records and networks of Form International, a specialised management, investment, and consulting firm in the sector.

IMPACT

By 2030, Treevive will develop over 30 projects in tropical Africa, Latin America and Asia, that will:

- conserve and restore at least 2 million ha of forest landscapes;
- generate over 33 million tCO₂ emission reductions and removals;
- conserve, restore and enhance the ecosystem (e.g. biodiversity, soil, water);
- generate 7,500 jobs and impact 30,000 people by improving their livelihoods.

COMPANY OVERVIEW

Commodity:

Carbon credits, timber, NTFPs, agroforestry products

Annual Revenue (USD):

Pre-revenue

#employees: 11-50

#of years in operation:

Less than 2 years, with 30 years of experience of Form International

FUNDING ASK

Amount (USD): 1.1m - 5m

Instrument: Debt, Grants

Use of funds:

Establishment of Treevive as a subsidiary of Form International and fundraising for the fund to become operational in the development and implementation of new forest carbon projects.
